

Second time around at Symphony Innovate 2018 for MDX
Unveils new, extended functionality
Enriches the native Symphony user experience

London and New York – 2nd October 2018. MDX Technology Ltd., the leading provider of real time data distribution solutions to the global trading community, is delighted to be sponsoring and exhibiting at Symphony Innovate 2018 for the second year running. MDX will be showcasing a number of new developments which will significantly enrich the functionality within the native Symphony platform.

MDX is on a mission to continually enhance the overall Symphony user experience. The new functionality includes the addition of more interactive pages, where one or more 'cells' on the page can be edited directly within Symphony by permissioned users facilitating even greater collaboration. All changes can then be shared immediately with all other Symphony users, both internally and externally, as well as with users of the MDXT Connect content visualisation end points working simultaneously on the same set of shared data, this also includes the Inline Data Bot. This allows data to be requested directly within a chat window, with the data updating in real time as the conversation progresses, thus allowing discussion of one or more instruments within a chat. This is the first in a series of new developments to be announced with more to follow over the coming months.

Paul Watmough, CEO and Co-founder of MDX comments, “This is our second outing as a sponsor and a partner, and we are looking forward to being part of this important event again. Team MDX will be out in force at Symphony Innovate where we will be unveiling a number of the new developments we have been working on for our clients. We are excited about the benefits these will deliver to our users which are also helping us to achieve our goal of continually enriching the existing Symphony user experience. Over the last 12 months the interest in the MDX/Symphony offering has been gaining pace, as has our relationship with Symphony which is going from strength to strength. We are delighted to be supporting Innovate 2018 and having the opportunity to demonstrate how smarter collaboration in action can truly help clients to further transform team collaboration capabilities and significantly enhance productivity.”

About MDX Technology Ltd

MDX Technology is the market leading provider of a highly flexible, bi-directional data connectivity, collaboration and distribution platform ensuring all our users get the data they need, where and when they need it - on time, every time. These unique offerings have been created to enhance, and fully support, the needs of both Sell and Buy side financial firms, Trading Venues, Inter Dealer Brokers and Commodities and Energy firms. Our proven solutions, developed by the industry's leading experts in this field, are in daily use within some of the world's premier trading institutions. MDX Technology is privately owned. The company is headquartered in London, with sales and customer support representation in all the major financial centres, either directly or via our trusted international partner network.
